

2022 Kékhegy Ami úrrá tesz

Mátra, Hungary

One of my favorite Hungarian colloquialisms is, “Sírva vigad a Magyar.” This roughly translates to “a Hungarian is only happy when they are miserable,” but also, “melancholic intermingling of joy and sorrow.” It’s a sentiment acutely felt while walking around the various Pincefaluk in the Mátra appellation. A Pincefaluk is a village dedicated entirely to small family cellars dug into the hillsides with a connected press house on top and often a small living space above that. While only a handful of these cellar houses are still actively used by hobby winemakers today, a few families are doing something really special, like Szilvia and Tibor of Kékhegy Pince in Gyöngyöspata. A first generation winemaking family and not a part of long lineage in the Mátra, they actively chose this place because of its massive potential and freedom to pursue what they want. Often unfairly pigeonholed as just producing fresh mass-produced aromatic white wine, it’s one of the most underestimated appellations in Hungary. It has remarkable andesite riddled volcanic soils, a wide range of varietals and is ideal for organic farming. There’s also a synergy of other like minded producers that we are humbled to work with like Fanni and Gábor Karner, Bálint Losonci and Levente Major who are all pioneering producers in the natural wine scene in Hungary. Szilvia and Tibor founded the winery in 2009 with a single hectare. Certified organic in 2016 they now farm 3 hectares and every job in the vineyard and in the cellar is handled by them and their two young daughters.

VINEYARDS

Last year they only sprayed twice (sulphur, orange-oil, potassium-hydrogen-carbonate, amino-acid based biostimulant, humic-acid preparation), made one deep tillage followed by healthy and diverse cover crops. They tried zero till for 4 years between 2015-2018, but the volcanic soils proved to be too thick and dense. They’ve since finally found a great balance and continue to experiment. The Siller comes from the Katona-berek dűlő just south of the village of Szűcsi overlooking a small lake. Their plot is just .55 hectares on the south-eastern side of the hill. The soil is clay with andesite tuff. There’s remarkable and ever present airflow here and it’s warm enough to afford a long growing season for the Cabernet Sauvignon. The acids are ripe and their ripeness with remarkable aromatics. The Zweigelt comes from the Úrráteszi dűlő just northwest of the village of Gyöngyöspata. Slightly higher altitude than the Katona-berek dűlő and southeast facing, it’s much cooler here. Sugar levels are accordingly lower, but the clay soils have more volcanic material and lots of chalk, so there’s acidity and backbone to balance things out. There’s lift and freshness here without resorting to picking early. It’s also the right place and grape to best tackle climate change.

WINE MAKING

In the cellar, most wines are open vat fermented, basket pressed, and often aged in tank. Most grape material is moved by hand and instead of pump overs or higher extracted punchdowns, most maceration is done by hand as well. The only addition to their wines is SO₂, but they don’t want to set their pick date or predetermine their winemaking style in the service of needing less of it. They have no interest in high VA, green acids, or relying on extensive lees aging to add body. They don’t want to lose the grape in the process either. Most wines have around 30-60ppm and are bottled unfiltered. They are experimenting and pushing themselves with some zero-zero stuff down the road, but there’s no rush.

NOTES & PAIRINGS

“Ami úrrá tesz” roughly translates to, “what makes you noble?” It’s a 50/50 blend of 12 days skin contact Traminer blended with 4 days skin contact Cserszegi fűszeres [chez-er-gee Foozaresh]. The Úrráteszi vineyard is a cooler site coupled with a high lime content, so it amplifies the salt and aromatics without dropping acidity. It’s someplace in between a rosé and an aromatic baby skin contact wine. Bone dry and refreshing. Bottled unfiltered with minimal SO₂.

ANALYTICS & PRONUNCIATION

APPELLATION: Mátra

GRAPE COMPOSITION: Cserszegi Fűszeres (chez-er-gee foozaresh), Traminer

CLIMATE: Continental

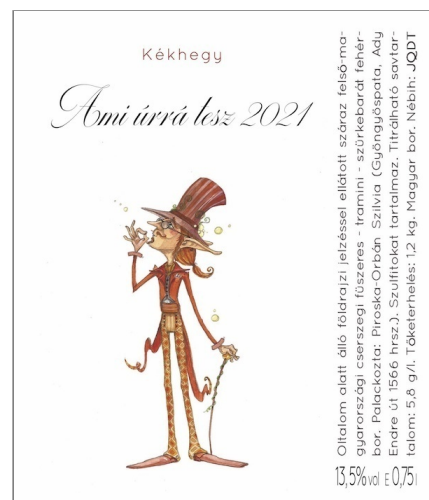

SOILS: Clay, chalk and andesite

MACERATION & AGING: 12 days skin contact Traminer blended with 4 days skin contact Cserszegi Fűszeres

ALCOHOL: 13.4%

RESIDUAL SUGAR: 1.3 g/l

ACIDITY: 5.1 g/l
