

2025 Štoka Teran Rosé

Kras, Slovenia

Wind, caverns and the Adriatic Sea define the Slovenian/Italian border region of the Kras. For over 200 years the Štoka family has nurtured the native red Teran and white Vitovska in the iron rich “terra rossa” that the Kras is famous for. Their farm is located north-east of Trieste about 5 miles from the Adriatic in the village of Krajna Vas. The Kras, or “Carso” as it is called in nearby Italy, is Europe’s first recognized cross border wine region where only 600 hectares of vines are planted between the two countries. The tiny amount of fertile soil is the result of various human and natural events. Historically oak forests dominated the land until the Venetians deforested nearly everything to build ships and city of Venice. The resulting erosion and the famously strong winds called the “burja” caused huge amounts of topsoil to simply blow away. People learned how to build stone walls called “grize” to protect against the wind and small manmade lakes to gather rain called “kali” to keep crops alive. Farmers, including the Štoka family, even learned to transport soil to naturally protected locations. Coupled with the regions already soluble Bedrock (mostly limestone and dolomite) and lack of surface water, the Kras is riddled with sinkholes, cenotes, and massive mostly unexplored underground caves. It is one of the most severe and unique terroirs in the world.

VINEYARDS

Štoka farms about 25 hectares with roughly 7 devoted primarily to Teran with smaller parcels of Vitovska, Cabernet Sauvignon, Chardonnay, and Merlot. With soils rich in iron oxides (hematite), the drastic contrast of color between the red soil (Terra Rossa), green vines, and ripe grapes seems almost artificial. Depending on the amount of top soil, limestone rocks often stick out like teeth with surrounding vegetation struggling for survival. 250 meters above the Adriatic these sites are cooler than the more coastal Italian vineyards. The combination of wind, altitude, and proximity to the Alps are essential for accumulating greater complexity. All of the vines are about 15 years old, fertilized with cow manure, and dry farmed.

WINE MAKING

Considered one of the oldest and most revered local grapes. Harvesting is done by hand, destemmed, and macerated for 8 days before a long and slow native fermentation in large oak barrels. A small portion spends 10 months on the skins to serve as a blending agent. The wine is then racked to used barrels and moved into caves for aging. Full malolactic fermentation results in added texture and weight.

NOTES & PAIRINGS

Other than the tannic old vine Miloš Rosé, this is the only other one we import. It's also the complete opposite. This is painfully fresh, zero maceration, and gets its color from the addition of a little Cabernet Sauvignon and Merlot to the Teran. We brought in a little to help fill a container years ago and it's become a small lot favorite even since. Sour cherries, watermelon, and a hint of the bloodiness that's common in the 100% Teran. Never rushed to market, it can handle some age as well.

ANALYTICS & PRONUNCIATION

PRODUCER: Štoka (Shtoe-kah)
APPELLATION: Kras (Kraush)
GRAPE COMPOSITION: Teran (TehRahn), Cabernet Sauvignon, Merlot
CLIMATE: Maritime
SOILS: Red Karst (Terra Rossa)
EXPOSURE: Southwestern
MACERATION & AGING: Pressed cold without maceration
ALCOHOL: 12.2%
RESIDUAL SUGAR: 0.1 g/l
ACIDITY: 5.17 g/l
